

Skintel

YOUR SKIN. YOUR STORY.

By: Meghann De Jesus A2

01

What is Skintel?

ABOUT THE APP: **SKINTEL**

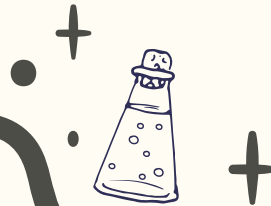

Serves as a guide that offers skincare product and routine recommendations

Includes notifications that remind the user to stay on track with their skin care routine

Skintel is a skincare app that helps people to find effective skincare products and routines that suit their unique skin care needs.

Contains a feature that requires the user to take a photo of their face to allow the app to analyze the user's skin

Designed to track the user's progress when they follow the app's suggested skincare products and routines

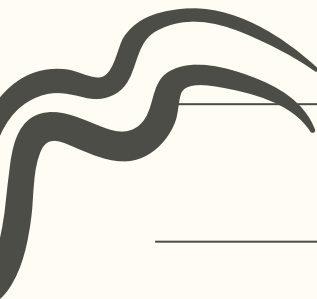

WHY **SKINTEL** ?

CONVENIENCE:

- Are you struggling to find effective skincare products and routines that would prevent future skin breakouts?
 - Well Skintel's main purpose is to help users discover skincare products and routines personalized to their unique skin type, concerns, and goals.
- Do you want to prevent making poor skin care decisions when buying new products?
 - By following Skintel's skin care recommendations (which is based on your skin analysis), you can reduce the potential skin damage caused by products, and you can save your money too.

WHY **SKINTEL** ?

WHO DOES IT HELP?:

- Skintel helps every individual with concerns about their skin's health:
 - Are you a parent who's concerned about their child's hereditary/hormonal skin condition (e.g. rashes, eczema, acne, etc.)
 - Are you a rising teen going through the worst case of puberty and are in need of reliable skin care information?
 - Are you an adult trying to maintain your skin's health?
 - ...Maybe an elder trying to find a solution for your wrinkles, dryness, age spots, and chronic skin conditions?

Skintel is designed for anyone seeking healthier skin - and note: skin health affects everyone.

02

The Inputs

How the app can make its decisions

I N P U T S

Information	Examples you can Input
USER'S BIRTHDAY	User's birthday is January 13, 2008
DAILY/WEEKLY ACTIVITIES AND LIFESTYLE	User plays volleyball daily and sleeps at 12am every night.
SKIN TYPE	Combination skin (oily & dry skin)
SKIN CONCERNS	User has concerns of acne, acne scars, and eczema
SKINCARE GOALS	To have a consistent skincare routine, reduce the amount of pimples, and remove the acne scars off their face
SKINCARE PRODUCT PREFERENCES	User prefers vegan-only products
BUDGET RANGE	No product over \$50-100
ALLERGIES & SENSITIVITIES	User is allergic to argan oil based ingredients
LOCATION	Arcadia, LA
CURRENT SKIN ANALYSIS (PHOTO UPLOAD)	[User uploaded a photo of their front, bare face]
SKINTEL DIARY	User writes in their digital Skintel diary about day 5 following the app's recommended skincare routine
FEEDBACK ON PRODUCTS USED	Review on CeraVe foaming facial cleanser: "My skin started to break out less after 3 days of usage"

03

The Outputs

What the user gets from the app

Outputs

- 1.) Based on the user's inputs, the app will check in with the user through daily notifications, or reminders.
- 2.) Based on the user's current age, lifestyle, skin type, skin concerns, skincare goals, skincare product preferences, budget range, allergies, and current skin state, the app will suggest skincare products personalized for the user.
- 3.) After the user posts a review on a product they tried through Skintel, they will earn points, which lead to rewards.
- 4.) After the user inputs feedback on the product- Did the product help you towards your skincare goals? Did it not work?- Skintel will store the feedback you give on these products, so you whether to use them again or not.

Sketches & Explanations

The app's layout

Check out Skintel:

Output: "Welcome
[NAME]"

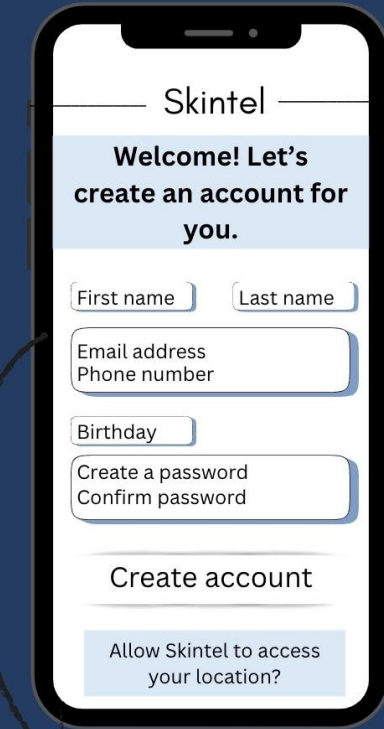

Drop down box: click
skin type that best
describes user

Drop down box: click

Spots

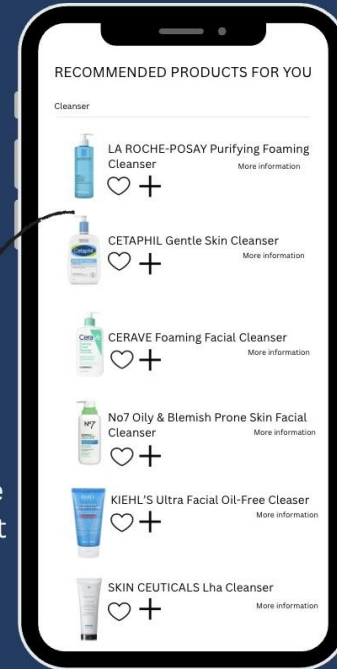

Identifies type of skin and skin concerns

Output: Skin Health Score with a list of recommended products

Heart button: option to favorite and store product

Plus symbol: "Save for later"

A longer, continuous list of products personalized to the user's skin type.

PROCESSING & STORAGE

01

Processing

- Matching:
 - User's dry skin type will be matched with hydrating products
 - User's eczema concern will be matched
 - If user's birthday is 07/31/2010, then they turn 16 on 07/31/2026
- If/then:
 - User's budget is \$20-50, then the app will show products ranging from \$20-50
 - If user is allergic to argan oil, then the app will hide all products containing argan oil
- Comparing:
 - App will compare the user's first photo of their skin to their most recent photo of their skin
- Counting:
 - The app will count the amount of times the user completes their skincare routine

02

Storage

- Stored Information:
 - User's personal information: birthday, lifestyle factors, skin type, skin product preferences, allergies/sensitivities
 - Previous skincare that worked and didn't work

PEER REVIEW

I ADDED:

Based on the feedback given by my peer, I added a feature that allows skincare that worked/didn't work to be stored. This would allow the user to have a record of previously used products - giving them an option to look back at the pattern of what products their skin works best with.

THANK YOU
